01 Project Overview

■ Vision

Build a mobile and web platform where unsigned and rising artists can publish music, get discovered, and receive payments easily through MTN Mobile Money. The platform should be lightweight, transparent, and focused on creator earnings instead of only playback volume.

■ Purpose

This project is a creator-first music platform that combines streaming, artist promotion, and digital payments. Its main purpose is to solve the gap between artist visibility and artist income by giving young talent a place to publish content and monetize it through direct fan support.

■ Problem Statement

Many emerging artists struggle to get visibility on major streaming platforms, and even when they get plays, earnings are often too small or too indirect. The platform solves this by adding local payment support, creator earnings dashboards, and premium tools that help artists earn from fans more directly.

■ Market Opportunity

The opportunity is strong because recorded music revenue in sub-Saharan Africa is growing while creator monetization problems remain unresolved. That creates room for a platform that combines discovery, direct support, and local payment methods for artists who are under-served by large streaming services.

■ Key Market Gaps

- Weak monetization for emerging artists
- Poor visibility for young and local talent
- Limited local payment integration on creator platforms
- Low trust in payout transparency
- Too much focus on large catalogs instead of talent development
- Limited support for micro-payments and fan tipping
- Weak promotion tools for unsigned artists

■ Objectives

1. Help artists upload and manage their music.
2. Help fans discover and support new talent.
3. Enable direct money flow using MTN Mobile Money.
4. Provide payout transparency and earnings tracking.
5. Offer premium creator tools and fan membership plans.
6. Create a scalable base for future subscriptions, ads, promotions, and analytics.

■ Scope of the System

The first version should launch in one country or a small MTN-supported region, not across all markets at once. The initial scope should focus on artist uploads, streaming, discovery, payment collection, creator payouts, and premium access control.

■ Target Users & Core Roles

Artist

- Uploads tracks, views earnings, promotes content, requests payouts.

Listener / Fan

- Streams tracks, follows artists, tips, subscribes, shares content.

Admin

Promoter / Curator

- Approves content, manages disputes, controls moderation, tracks performance.

- Features artists, creates playlists, helps discovery.

02 Features

■ 2.1 Full Feature List

The core supply, discovery, engagement, and monetization features that make up the product.

01 Artist onboarding

Artists register with profile details, genre, location, and social links. This is important because the platform needs identity, creator segmentation, and a basis for payouts.

02 Music upload system

Artists upload tracks, covers, metadata, and release details. This is the core supply-side feature and should support drafts, publishing, editing, and takedown requests.

03 Artist profile pages

Each artist gets a public profile with music catalog, followers, earnings summary, and featured releases. This helps discovery and makes the platform feel creator-owned.

04 Streaming and playback

Users can play music, pause, skip, queue, and browse tracks. The app should support low-data playback because mobile bandwidth and affordability matter for the target audience.

05 Discovery feed

A personalized discovery feed should surface new artists, trending songs, and local recommendations. This directly targets the market gap where unsigned talent is hard to find.

06 Follow and fan engagement

Fans can follow artists, like songs, comment, and share releases. Engagement features help artists grow organically and give the app a community layer beyond streaming.

07 MTN Mobile Money payments

Users can pay with MTN Mobile Money for tips, subscriptions, premium content, or downloads. MTN's API supports payment-related products including collection and disbursement, with sandbox and production-style integration paths documented on the developer portal.

08 Wallet and earnings dashboard

Artists should see payments received, pending withdrawals, transaction history, and payout status. This is critical because payout transparency is one of the strongest differentiators you can build.

09 Payout system

The platform should allow creators to withdraw earnings to MTN Mobile Money wallets. MTN's disbursement support makes this technically realistic, subject to the operational setup and compliance requirements of the specific market.

10 Tipping and micro-support

Fans should be able to send small payments to artists as direct support. This is a strong fit for emerging creators because it monetizes even small communities.

11 Subscriptions and memberships

Artists can offer paid fan access to exclusive tracks, early releases, or premium content. This gives creators more than one revenue stream and avoids dependence on streaming alone.

12 Promotions and featured placements

Artists can pay for boosted visibility or featured slots. This is useful for early-stage monetization and can help creators get discovered faster.

13 Playlist and curation tools

Admins or curators can build playlists by genre, mood, region, or rising talent category. Curation helps solve the visibility problem that large platforms often handle poorly for small artists.

14 Notifications

Users get alerts for uploads, tips, follows, comments, and payouts. This improves retention and helps artists respond quickly to fan activity.

15 Admin moderation panel

Admins can approve tracks, reject copyrighted content, handle abuse, and manage disputes. This is necessary because copyright and payout trust are major risks in music platforms.

16 Analytics dashboard

Artists and admins can track streams, engagement, revenue, top songs, and conversion rates. Analytics help creators understand what content works and how to grow.

17 Copyright and takedown handling

The system should allow reporting, review, and removal of disputed tracks. This is a core risk-control feature for any music platform.

2.2 Features by User Tier

The same feature set organized by who gets access at which level.

Free User

- Register and log in
- Browse and stream music
- Follow artists
- Share tracks
- View limited artist pages

Artist

- Create an artist profile
- Upload music and artwork
- Edit metadata and releases
- View basic analytics
- Receive direct fan tips
- Request payouts

Premium Artist

- Unlimited or expanded uploads
- Advanced analytics
- Featured promotion slots
- Custom branding
- Faster payout visibility
- Campaign tools and audience insights

Premium Fan

- Early access to tracks
- Exclusive content
- Ad-free listening
- Fan badges
- Membership communities

03 Monetization & Premium Strategy

The right way to do this is to build a **freemium + creator monetization** system, where the app works for free at the basic level, but advanced tools and earning features are locked behind paid plans. The premium system should be controlled by server-side access rules, not just hidden buttons in the UI, so users only unlock features after a valid payment is confirmed.

■ Plan Tiers

1. Free Plan

- Entry level for all users. Fans browse, listen, follow artists, and share music. Artists create an account, upload limited tracks, and view basic stats — letting users experience value before paying.

2. Artist Starter Plan

- For new artists wanting more uploads, better visibility, and basic monetization tools: extra upload slots, simple analytics, tipping or paid track sales.

3. Artist Pro Plan

- The main paid tier for serious creators: high-limit or unlimited uploads, advanced analytics, featured promotion tools, better payout priority, custom branding, premium marketing tools.

4. Fan Support Plan

- For listeners wanting exclusive content, early releases, badges, private rooms, or ad-free listening — also usable for subscription access to select artist content.

5. Promotion Credits

- Artists can buy promotion credits separately from subscriptions, to boost a song, pin content, or appear in trending sections — flexible revenue for users who don't want monthly billing.

■ Revenue Model

The app owner earns from commissions on payments, premium artist subscriptions, fan subscriptions, promotion credits, and possibly advertising later. The strongest early revenue streams are transaction commission, premium creator accounts, and paid promotion features.

■ Premium Access Logic

The premium feature flow works like this: the user sees the feature in the UI; if free, it is visible but disabled or partially locked; tapping it shows an upgrade screen; after payment is confirmed, the backend changes the user's subscription status; the app checks that status and unlocks the feature.

Important rule: Never make premium access depend only on hiding buttons in the front end. The real lock must be enforced in the API and database — front-end controls can be bypassed. Every premium screen, API endpoint, and backend action should verify entitlement before allowing access.

■ How to Build Premium Access

1. **Create plan tables** — database tables for users, plans, subscriptions, and entitlements, with each user linked to a plan (free, starter, pro, fan support).
2. **Define entitlements** — the list of features a plan can access (e.g. Pro: advanced analytics, promotion credits, unlimited upload; Free: basic listening, limited upload).
3. **Build a payment flow** — route upgrade clicks through the MTN Mobile Money payment process; the backend receives confirmation and activates the selected plan.
4. **Use webhook or callback verification** — do not activate premium access on the front end; wait for the payment callback/webhook to confirm success before updating the subscription.
5. **Protect routes and APIs** — every premium screen and endpoint checks the correct entitlement (analytics pages, upload limits, promotions, payout tools).
6. **Update the UI dynamically** — refresh app state and unlock features immediately once marked premium; downgrade automatically on expiry.

■ Example Premium Features

Advanced Analytics

- Plays, saves, shares, audience location, revenue trends, and conversion stats — hidden behind Artist Pro as a high-value creator tool.

Unlimited Uploads

- Free users get a small track cap; premium users get more or no cap — a strong upgrade trigger since artists hit limits quickly.

Featured Promotion

- Premium users can boost songs to the homepage or discovery feed, tied to plan benefits or sold as separate credits.

Payout Tools

- Faster withdrawal processing, payout history, and better earning dashboards — value tied directly to revenue.

Fan Exclusive Content

- Paid fans access early releases, private sessions, and special badges — monetizing loyalty rather than just traffic.

■ Recommended Pricing Structure

A practical starting structure in XAF could look like this: Free — 0 XAF; Artist Starter — low monthly fee; Artist Pro — higher monthly fee; Fan Support — low monthly fee; Promotion credits — one-time purchase. Start with simple pricing and adjust after testing conversion rates.

■ Recommended Approach

Start with one strong premium package for artists, one for fans, and one optional promotion-credit model. That gives recurring revenue, one-time revenue, and a clean upgrade path without making the app too complicated too early.

04 System Architecture & Technical Design

■ System Architecture

The system should use a client-server model with a React front end, a Node.js/Express backend, a database for users and transactions, and cloud storage for audio files. MTN Mobile Money should be connected through server-side API calls, with payment confirmation updating subscription and wallet records.

Main Functional Modules

- Authentication module
- Artist profile module
- Upload module
- Streaming module
- Discovery module
- Payment module
- Subscription module
- Wallet and payout module
- Admin module
- Analytics module
- Notification module

Technical Layers

- Frontend app
- Backend API
- File storage service
- Audio streaming service
- Payment integration layer
- Admin dashboard
- Analytics service
- Notification service

■ Database Design

Core tables

- Users
- ArtistProfiles
- Tracks
- Albums
- Playlists
- Streams
- Payments
- Subscriptions

- WalletTransactions
- Withdrawals
- Follows
- Comments
- Promotions
- Notifications
- Reports

Important subscription fields

- userId
- planName
- status
- startDate

- endDate
- paymentReference
- entitlementLevel

■ Payment Flow

1. User selects a plan or support action.
2. App sends payment request through MTN Mobile Money.
3. MTN returns transaction status.
4. Backend verifies success.
5. Subscription or wallet balance is updated.
6. Premium access is unlocked automatically.

■ Premium Feature Enforcement

Each premium action must call an authorization check before execution. For example, the analytics screen, upload-limit endpoint, promotion endpoint, and payout endpoint should all verify whether the user's plan includes those rights.

Functional Requirements

- User authentication
- Role-based access control
- Artist onboarding
- Track upload and management
- Playback and discovery
- Payments and wallet integration
- Subscription management
- Payout processing
- Notifications
- Admin moderation
- Analytics reporting

Non-Functional Requirements

- Fast loading on mobile networks
- Secure payment handling
- Scalable architecture
- Reliable uptime
- Content moderation support
- Responsive UI
- Strong data privacy and access control

■ Security Considerations

- Use JWT or secure session auth
- Validate payment callbacks on the server
- Protect premium APIs with entitlement checks
- Encrypt sensitive data
- Log payment and payout events
- Apply rate limiting and abuse protection

■ Content Moderation

The admin panel should allow track review, copyright reports, takedowns, and abuse handling. This is necessary because music platforms face legal and trust issues if copyrighted or harmful content is not controlled.

■ Analytics & Reporting

Artists should be able to see plays, likes, shares, tips, subscriptions, earnings, and conversion rate. Admins should see total traffic, top artists, payment totals, and plan performance.

05 Roadmap & Build Plan

■ Development Phases

Phase 1 MVP Foundation

- User registration and login
- Artist onboarding
- Music upload and storage
- Public artist profiles
- Basic streaming and playback
- Search and discovery feed
- MTN Mobile Money payment collection
- Basic earnings dashboard
- Basic admin moderation

Phase 2 Revenue Expansion / Monetization

- Fan tipping
- Creator withdrawals to MTN Mobile Money
- Paid subscriptions or memberships
- Premium plan checks
- Featured placements and promotions
- Playlist curation
- Push notifications
- Engagement tools (follow, comment)

Phase 3 Growth

- Advanced analytics
- Recommendation engine
- Automated copyright reporting
- Featured promotions
- Fan communities
- Referral system
- Expanded curation tools

Phase 4 Scale

- Multi-country support
- Multi-currency support
- Partner dashboards for promoters and labels
- In-app campaigns
- Ad system
- Advanced fraud and copyright controls

■ Step-by-Step Build Process

1. **Define the MVP scope.** Pick one country, one target artist segment, one primary payment flow, and define plans and entitlements up front. MTN's API guidance shows support varies by market and product, so narrowing scope reduces integration risk.
2. **Build authentication and profiles.** Create user sign-up, login, role-based access, artist account types, and profile pages — the structure needed before music and payments are added.
3. **Build upload and storage.** Implement music upload, file validation, artwork upload, metadata fields, and track publishing — the content foundation of the app.
4. **Build playback and discovery.** Add the music player, search, categories, trending content, and artist discovery feed — without it, artists won't get the exposure that makes the platform valuable.
5. **Integrate MTN Mobile Money collection.** Implement payment collection for tipping, subscriptions, and premium content using MTN's collection and request-to-pay flows.
6. **Confirm payment and activate plans; add premium route protection.** Lock premium screens, endpoints, and actions behind entitlement checks so access only follows a verified payment.
7. **Build earnings tracking.** Show a dashboard for money received, pending balance, completed transactions, and payout history — one of the platform's main differentiators.
8. **Add payouts.** Enable withdrawals from the platform wallet to MTN Mobile Money, using MTN's disbursement support once compliance and account setup are complete.
9. **Add moderation and compliance.** Build copyright reporting, admin review, takedown tools, and content approval early, since legal and trust risks grow quickly.
10. **Add fan monetization tools.** Introduce tipping, subscriptions, paid releases, and featured artist support to strengthen the business model beyond simple streaming.

11. **Add analytics and growth tools.** Add performance dashboards, referral tracking, trend insights, and campaign tools once content and payments are working.
12. **Test and deploy.** Test expiration, renewal, failed payment, and downgrade flows before shipping.

06 Actor Dashboards

Each actor is treated as a role-based workspace. After login, the system should detect the user role and redirect to the correct dashboard, showing only the tasks allowed for that role.

1 Visitor Dashboard

A visitor is a user who has not signed up yet. This dashboard is mostly public and acts as the entry point into the platform.

- Browse landing pages
- View featured artists and trending music
- Search public artist profiles
- Read about premium plans
- Create an account or sign in

2 Listener / Fan Dashboard

For registered fans who listen to music and support artists — simple, fast, centered on discovery, engagement, and payments.

- Stream music
- Search songs, albums, and artists
- Follow or unfollow artists
- Like, comment, and share tracks
- Create and manage playlists
- Tip artists using MTN Mobile Money
- Subscribe to premium fan plans
- Access exclusive or early-release content
- View listening history and saved items
- Manage account settings and notifications

3 Artist Dashboard

For creators who upload and manage their music — focused on publishing, revenue, audience growth, and promotion.

- Create and edit artist profile
- Upload songs, albums, and cover art
- Add metadata (title, genre, description, release date, tags)
- Edit or remove uploaded content
- View stream counts and fan engagement
- Track earnings and payout status
- Request withdrawal to MTN Mobile Money
- Launch paid promotions or featured placements
- Read fan feedback and comments
- View audience insights and analytics
- Manage subscription plan and upgrade options

4 Premium Artist Dashboard

Everything in the normal artist dashboard, plus locked premium tools that improve growth and monetization.

- Access advanced analytics
- View detailed revenue breakdowns
- Use unlimited or expanded upload limits
- Promote tracks from the dashboard
- Unlock branded profile customization
- See fan conversion and subscription data
- Access priority support
- Manage exclusive premium campaigns
- Track performance by region and audience segment

5 Admin Dashboard

The control center for the whole platform — used to supervise users, content, monetization, and system health.

- View platform overview statistics
- Manage users and artist accounts
- Approve or reject uploaded content
- Handle reports and copyright complaints
- Moderate comments and abuse cases
- Review payment issues and failed transactions
- Manage featured music and homepage content
- Track revenue and subscription activity
- Send announcements and platform notifications
- Monitor system performance and logs

6 Super Admin Dashboard

The highest-level control panel, for the platform owner or top system manager, covering sensitive administrative and configuration tasks.

- Create and manage admin accounts
- Define user roles and permissions
- Configure monetization rules
- Set subscription prices and plan features
- Control payment gateway settings
- Manage platform-wide policies
- View audit logs and security records
- Control feature flags and system modules
- Manage integrations and global settings
- Oversee strategic platform performance

7 Promoter / Curator Dashboard

For people who help push music into the right audience — focused on discovery, curation, and promotional support.

- Create playlists and collections
- Feature selected artists
- Recommend songs for trending sections
- Run promotional campaigns
- Organize talent showcases
- Track campaign performance
- Monitor which songs are gaining traction
- Support artist visibility strategies

8 Payment Gateway Dashboard

The external payment actor — mainly MTN Mobile Money — handling the financial side of user purchases and creator payouts.

- Process user payments
- Confirm successful transactions
- Support collections for subscriptions and tips
- Support disbursements for artist payouts
- Return payment status to the platform
- Trigger webhook or callback responses
- Help validate failed or pending transactions

9 Notification Service Dashboard

A system panel or internal service area for platform alerts, keeping users informed and engaged.

- Send upload confirmations
- Notify artists of tips and subscriptions
- Alert users about new releases
- Send payout notifications
- Broadcast admin announcements
- Notify about failed payments or renewals
- Deliver engagement alerts (likes, comments)

10 Analytics Dashboard

Used by artists, admins, and super admins to understand performance — presenting data visually to support decision-making.

- Show stream statistics
- Display revenue charts
- Show subscriber growth
- Compare track performance
- Track fan engagement
- Monitor conversion rates
- Analyze top-performing content
- Review geographic and demographic insights

■ Recommended Dashboard Structure by Actor

Listener Dashboard Sections

- Home
- Discover
- Search
- Library
- Playlists
- Support artists

- Users
- Content moderation
- Payments
- Reports
- Analytics
- Settings
- Audit logs

07 Feature Backlog

The backlog uses a simple value-vs-effort approach combined with MVP thinking. Features that solve urgent user pain, generate revenue, or reduce platform risk are ranked first, while advanced or optional items are ranked later.

Legend — Priority 1 = must build first · Priority 2 = should build after MVP · Priority 3 = nice to have later. Effort & Value: Low / Medium / High.

ID	FEATURE	MAIN ACTOR	USER NEED / MARKET GAP	PRIO	VALUE	EFFORT	WHY IT MATTERS
F01	User registration and login	Visitor, Listener, Artist	Basic access and identity	1	High	Low	Required for all dashboards and role-based access.
F02	Role-based dashboard routing	All users	Show correct workspace per role	1	High	Medium	Prevents confusion and supports secure access.
F03	Artist profile creation	Artist	Visibility and identity	1	High	Low	Foundation for uploads and discovery.
F04	Music upload and publishing	Artist	Content creation	1	High	Medium	Core supply-side feature.
F05	Music playback / streaming	Listener	Listening and discovery	1	High	Medium	Core user value.
F06	Search and discovery feed	Listener, Visitor	Find talent easily	1	High	Medium	Solves weak discovery for young artists.
F07	MTN Mobile Money payment collection	Listener, Artist	Local payments	1	High	High	Needed for monetization and creator support.
F08	Subscription / plan purchase flow	Listener, Artist	Upgrade access	1	High	Medium	Enables premium revenue.
F09	Backend entitlement checks	System	Lock premium access	1	High	Medium	Prevents free access to paid features.
F10	Basic artist earnings dashboard	Artist	Earnings transparency	1	High	Medium	Builds trust with creators.
F11	Admin moderation panel	Admin	Content safety	1	High	Medium	Needed for copyright and abuse control.
F12	Tipping / micro-support	Listener	Direct support to artists	2	High	Medium	Strong monetization gap opportunity.
F13	Payout request to MTN wallet	Artist	Withdraw earnings	2	High	High	Completes the earning loop.
F14	Fan subscriptions / memberships	Listener	Exclusive access	2	High	Medium	Recurring revenue and superfans.
F15	Paid exclusive content	Artist, Listener	Unlock special tracks	2	High	Medium	Monetization and fan loyalty.
F16	Featured promotions / boosts	Artist	Better visibility	2	High	Medium	Artists pay for exposure.
F17	Follow / unfollow artists	Listener	Stay connected	2	Medium	Low	Increases retention and engagement.
F18	Likes, comments, shares	Listener	Social engagement	2	Medium	Low	Supports discovery and community.
F19	Notifications system	All users	Engagement alerts	2	Medium	Medium	Improves retention.
F20	Basic analytics for artists	Artist	Track growth	2	High	Medium	Helps creators improve performance.
F21	Playlist creation	Listener	Organize music	2	Medium	Medium	Common user expectation.
F22	Curated playlists by genre/city	Curator, Admin	Discovery and promotion	2	High	Medium	Helps surface young talent.
F23	Artist story / behind-the-track cards	Artist, Listener	Authenticity and context	3	Medium	Low	Matches what users want more of.
F24	Live streaming / fan Q&A	Artist, Listener	Direct artist connection	3	High	High	Strong community feature, but heavier build.
F25	Fan clubs / private communities	Artist, Listener	Superfan engagement	3	High	High	Good for recurring revenue.
F26	Advanced analytics	Premium Artist	Deep performance insight	3	High	High	Valuable, but not needed for MVP.
F27	Recommendation engine	System	Personalized discovery	3	High	High	Useful after more user data exists.
F28	Merch or ticket sales	Artist, Listener	In-app commerce	3	Medium	High	Great later revenue stream.

ID	FEATURE	MAIN ACTOR	USER NEED / MARKET GAP	PRIO	VALUE	EFFORT	WHY IT MATTERS
F29	Copyright reporting and takedown workflow	Admin	Legal protection	2	High	Medium	Important for platform safety.
F30	Referral system	All users	Growth and acquisition	3	Medium	Medium	Helps user growth later.

■ Why These Come First

The Priority 1 features solve the biggest market gaps: discovery, monetization, and trust. Building them first lets you test whether artists upload, fans listen, and payments actually happen before spending time on advanced features. After the MVP, the next most useful features — tipping, subscriptions, paid content, featured promotion, notifications, and analytics — create the first real revenue engine and improve retention. Features such as live streaming, fan clubs, recommendation engines, and merch sales are powerful but need more traffic, trust, and infrastructure, so they come after the app proves strong usage and monetization.

■ Recommended Dashboard Placement

- **Visitor:** F01, F06, F30
- **Listener:** F05, F06, F12, F14, F17, F18, F19, F21
- **Artist:** F03, F04, F10, F13, F15, F16, F20, F23, F24, F26, F28
- **Admin:** F11, F22, F29
- **Super Admin:** plan control, access control, payment settings, system config
- **Payment service:** F07, F08, F09, F13

■ Suggested Delivery Order

Sprint 1

- Authentication
- Role routing
- Artist profile
- Basic UI shells

Sprint 2

- Upload system
- Streaming player
- Search and discovery

Sprint 3

- MTN payment integration
- Subscription plans
- Entitlement protection

Sprint 4

- Earnings dashboard
- Admin moderation
- Copyright reporting

Sprint 5

- Tipping
- Payouts
- Notifications

Sprint 6

- Promotions
- Analytics
- Fan memberships

■ Feature Selection Rule

If a feature does one of these, move it up the backlog: helps users discover talent; helps artists earn money; builds trust and safety; increases retention; improves conversion to paid plans.

08 Risks & Success Metrics

■ Key Risks & Mitigation

- **Copyright risk** — add moderation and takedown tools.
- **Low adoption** — launch with a narrow niche and country.
- **Payment failure** — verify callbacks and retries.
- **Weak revenue** — use multiple monetization streams.
- **User bypass of premium** — enforce backend entitlement checks.
- **Payout errors and fraud** — build moderation, payout tracking, and market validation into the first release rather than postponing them.

■ Success Metrics

- | | |
|-----------------------------|------------------------------|
| • Number of artist signups | • Total creator earnings |
| • Number of uploaded tracks | • Withdrawal completion rate |
| • Monthly active listeners | • Artist retention |
| • Payment conversion rate | • Track engagement rate |

■ Expected Business Outcome

If executed well, the platform can become a local creator economy product that earns from payments, premium tools, and artist growth services. The strongest positioning is not "a Spotify clone," but a platform that helps young talent grow and earn directly.

09 Final Recommendations

Focus on the creator economy first

Build this as a creator monetization platform first and a streaming platform second. If you focus on young talent, local discovery, transparent payouts, and MTN Mobile Money, you will have a much stronger market position than a general-purpose music app.

It's feasible if built in stages

This project is feasible, commercially interesting, and technically realistic if you build it in stages and keep the first release focused. The most important idea is to combine discovery, creator monetization, and reliable local payments into one clear product.

Build the money loop first

Do not overload the first version with too many advanced social or AI features. Build the money loop first: artist uploads music, fans discover it, fans pay, artists get paid, and the app owner earns commission and premium fees.

End of document
